MacBook grading guide

Cosmetic condition / Testing status / Battery requirements

Tested and Untested identify testing status separately from cosmetic grade. Tested refers to the stated checks; confirm the exact QC scope and batch notes before purchase. Untested does not mean every unit is faulty, and does not guarantee full functionality.

Tested devices

A Grade - Well-Preserved Appearance

Well-preserved overall appearance with only barely noticeable fine marks. Extremely light signs of use on the display; no dents or paint loss. Battery health >=85%; functions verified.

Battery health >=85% / Functions verified

B Grade - Light Everyday Wear

Light scuffs from normal use, with light signs of use on the screen. Minor wear or nicks on enclosure edges and corners do not detract from the overall appearance. Battery health >=80%; functions verified.

Battery health >=80% / Functions verified

Untested devices

Full functions are not verified. Any stated power-on or LCD condition is a limited observation. Unknown faults may be present. Battery health is unverified unless an explicit threshold is stated.

C Grade - Visible Wear & Screen Scratches

Multiple visible scuffs or small dents on the enclosure, with clearly visible screen scratches. Cosmetic flaws are readily apparent, but basic screen display remains unaffected. Battery health is not verified.

Battery health not verified

Battery health is not tested / verified.

D Grade - Powers On with a Hardware Defect

Heavy enclosure wear, with cracked screen glass, backlight abnormalities or touch-input recognition faults. A single hardware defect is present, but the device can power on. Battery health is not verified.

Battery health not verified

Battery health is not tested / verified.

Before ordering

Confirm model, storage, grade mix, testing scope, battery requirements, lock status and batch-specific exceptions in the agreed order specification. Cosmetic grade alone does not establish battery health or activation / account-lock status.
